

Included Options

Every new Roca Sorter comes preinstalled with four basic sorts and sifts. These work for all of the TCGs that we support, including Magic: The Gathering, Pokémon, Disney Lorcana, and Yu-Gi-Oh!.

Below are sifts and sorts that are readily available on your machine:

Sift	Bulk Sift	Price Sift - Set, Name Sort
Sort	Set, Name	Name, Set

Sorts

'Set, Name' and **'Name, Set'** are the two sorts available in your Roca Sorter.

A **'Set, Name'** sort will first organize your cards by Set, and then by Name. Set is generally arranged alphabetically from A-Z, but for Magic: The Gathering there is also the option to arrange the cards in reverse chronological (newest first) order.

A **'Name, Set'** sort will first organize your cards alphabetically by card name, and then by set. This is ideal for TCGs that have a long tenure, like Magic, where some cards have been printed a dozen or more times and have many different sets.

The Roca Sorter has a capacity of 1,000 cards and will sort them in approximately 2 hours. The Roca Sorter Max has a capacity of 3,000 cards and will sort them in approximately 10 hours.

Sifts

'Bulk Sift' and **'Price Sift - Set, Name Sort'** are the two sifts included for your Roca Sorter.

The **'Bulk Sift'** option is a quick way to pull out all cards that are valuable from a large pile of bulk. What is valuable? The user can specify a minimum dollar amount for their search, and any items priced at or above this value will be identified as valuable by the robot and filtered accordingly.

The **'Price Sift - Set, Name Sort'** is considered a sift, but also has the convenience of a sort. Similarly to a **'Bulk Sift'**, this option will first sift out all valuable cards. Once sifted, those valuable cards will be arranged by set, and then by name. The non-valuable cards will not be sorted.

True sifts (not hybrid Sift/Sorts) save some time because they are doing less sorting, but they also process fewer cards at once. A **'Bulk Sift'** will process 875 cards in about 1 hour in the Roca Sorter and 3,000 cards in about 6 hours on a Roca Max, while a **'Price Sift - Set, Name Sort'** can process 1,000 cards in about 2 hours, 3,000 cards in about 10 hours on a Roca Max.

Specify A Set (All Games)

This function allows the user to create a custom block/allow list. The user will select the “Advanced Recognition Settings” on their tablet where they can specify which sets the Roca should consider for recognition while sorting. Cards will only identify as sets selected. If a card cannot be found in the specified set, it will be rejected.

Roca Sort to Ship

With this feature, available to Premium level customers only, the Roca accepts a batch of unsplit cards belonging to multiple customer orders and sorts them into their distinct orders.

How it works:

1. Generate a pull list by batching customer orders on your TCGplayer seller portal.
2. Pull cards for all orders at once from your inventory and load them into the tray in the sequence of the pull list.
3. Upload your pull list to the Roca sorter, and it will sort the cards from inventory order into distinct customer orders, separated by a green divider.
4. The Roca checks for missing or incorrect cards and will insert a warning card into any customer order that needs attention.

Additional Options

Roca has an extensive catalog of sort and sift options available by game. Roca has the ability to sort cards by set, name, color, rarity, type, variant, and collector number.

Below are some of our most popular sorts and sifts by game. However, there are more customizable options available. To add any of the listed sort or sifts to your machine, simply ask a representative to add them referencing the name list below or contact customer support to learn about additional custom sort and sift options.

Sift or Sort Name	Game	Description
